class Basic Class Diagram with Attributes and Operations

Assumption [2]: Every zone transitions into the "Zone Empty" state after its creation and before its destruction. A transition into the aforementioned state does not require C-MNG be notified.

Assumption [3]: C-MNG must be doubly notified whenever a transition to the "Not Only Correct Items" state is made. The first to indicate the presence of incorrect items in the zone and the second to specify the percentage range in which the zone's correct item ratio is found.
